Replicatio documentation

Replication studies have not been a part of scientific quality control in the humanities, especially in the humanities that work digitally. The [pilot project **“\(r\)reproducibility of Scientific Research in the Digital Humanities?”**](#) aims to create a paradigmatic basis for systematic replication studies as a methodological extension to classical hermeneutics for all text-oriented and digitally working humanities.

This wiki, which is maintained using the open source software [DokuWiki](#), is used for project documentation, the process by which a collection of key documents are created, organized, and managed. It is divided into different sections, which are organized into so-called [namespaces](#). On the left side, an [overview](#) of all posted content can be listed via the Website Tools Sitemap.

Sections in this wiki

- Glossary
 - [What are replication studies?](#): Replication, reanalysis, reproduction, follow-up research, reinterpretation, reuse.
 - [What is meant by SOP?](#): Procedural instructions in research.
 - [What does ancient Greek beta code look like?](#): Overview of the main beta-code transcriptions of ancient Greek.
 - [What does ... mean?](#): Brief explanations of the vocabulary and acronyms.
- eAQUA
 - [eAQUA - Extraktion von strukturiertem Wissen aus Antiken Quellen für die Altertumswissenschaft](#): Short documentation for the eAQUA portal.
A detailed manual on working with eAQUA has been published in the [Digital Classics Books](#) series and is available as a free PDF file [here](#).
 - [Das Portal eAQUA](#): Demonstrate co-occurrence analysis and parallel passage search.
 - [Export von Suchergebnissen](#): File formats when exporting search results.
 - [Signifikanzmaße bei der Beurteilung von Kookkurrenzen](#): Dice, Jaccard, Poisson, Log-Likelihood.
